

77% of the Fortune 100 utilizes messaging and collaboration software.

The productivity, collaboration, and team-building benefits of these platforms is unparalleled. With any new technology, however, comes new requirements for security operations, automation, and reporting.

For organizations using cloud-based collaboration tools like Slack, GreatHorn's Messaging Security provides a natively integrated solution for helping IT and Information Security teams easily monitor, manage, and secure their entire communication security infrastructure.

GreatHorn's Messaging Security solution provides unified security operations automation and reporting for Slack.

Prevent Account Compromise

Attackers rarely target only one environment; with GreatHorn, organizations can review and analyze login activity across all of their cloud communication platforms, including messaging and collaboration tools, helping stop suspicious account activity before it leads to a breach.

Integrate Security Monitoring & Response

In many organizations, Slack co-exists with existing email and communication tools. With GreatHorn's reporting and audit capabilities, IT and InfoSec teams can establish common policies for content and monitor for unusual account activity across all cloud communication environments from a single unified dashboard, driving down time to threat detection and response.

Monitor Third Party Access

User-installed bots and apps make Slack an efficiency driver, but tracking what permissions and vendors have access to these environments can be tricky. GreatHorn enables IT and Infosec teams to quickly identify and evaluate integrations and new apps, without getting in the way of team productivity.

Protect Sensitive Data

Through the use of the integrated GreatHorn Policy Engine, IT and infosec teams can define and enforce a single set of governance policies across all of their communication environments, ensuring that sensitive information, intellectual property, and regulated information is not being shared in violation of organizational policy.
