

## Get Facts and Respond at the Speed of Deception

GreatHorn's Cloud Email Security Platform changes the way you manage risk for your organization, layering sophisticated detection of polymorphic phishing threats with user engagement and integrated incident response, allowing your organization to address advanced threats at the moment risk enters your environment.

### Built on the Cloud, For the Cloud

No changes to mail routing or MX records, 5 minute deployment and out-of-the-box default policies give you the efficiency you require.

### End User Education at the Moment of Risk

Continuous engagement helps train end users at the moment a potential phish enters their inbox.

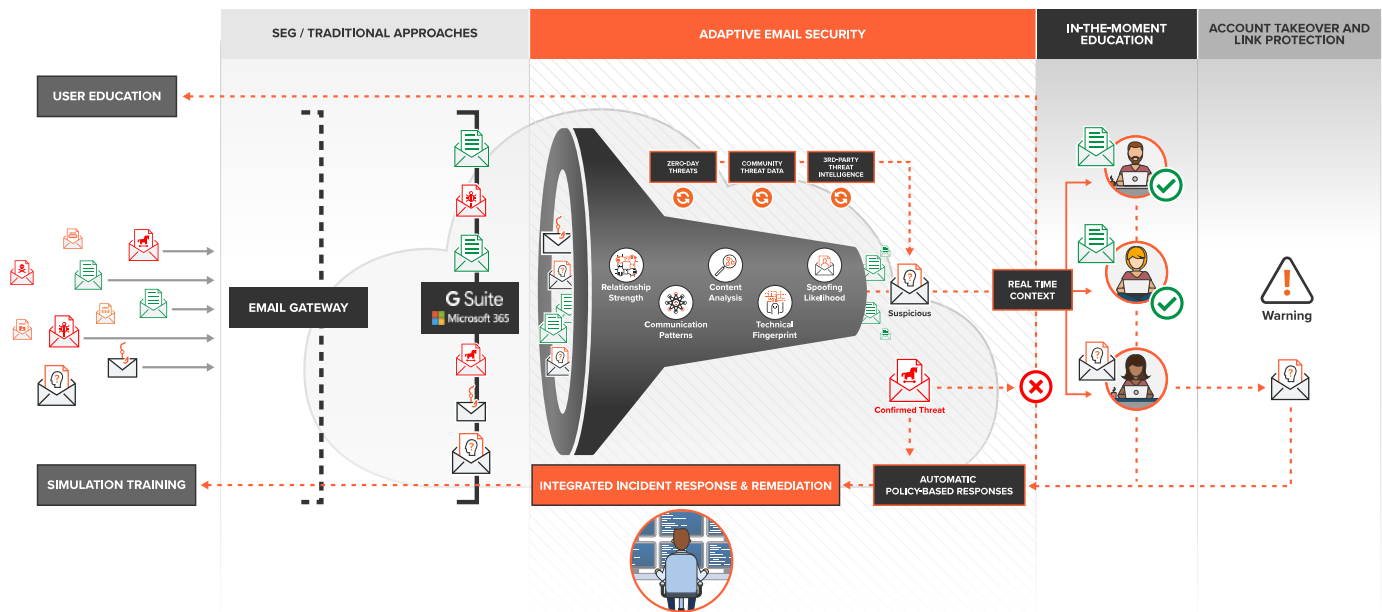

### Comprehensive Facts to Detect and Respond

Leverage the patented algorithm for detection of homoglyph attacks and use the most advanced relationship analytics-based BEC detection to reduce your response time.

## Reshaping Cloud Email Security to Address Today's Risks

Email security has relied too heavily on a threat prevention strategy – resulting in slow remediation, continued employee phish engagement, and a game of quarantine catch and release. With GreatHorn, you'll get protection throughout the email security lifecycle – by identifying and removing more threats, warning users in real-time of potential risks, and quickly remediating attacks from employee mailboxes.

## The World's #1 Email Security Solution

If your organization made the shift to cloud email platforms G-Suite and o365, your attackers have shifted their strategy to include zero-day attacks and increasingly complex social engineering tactics. GreatHorn empowers organizations to take a multi-layered approach to email security to more effectively respond to risk across each stage of the entire email lifecycle.

### Reduce risk of email-borne attacks with **Advanced Anomaly Detection**

GreatHorn adapts to your organization with out-of-the-box spoofing detection and a model for anomaly detection that evaluates relationships, communication patterns, and technical fingerprints that are unique to each sender and recipient organization.

With a threat detection engine that automatically adapts to the idiosyncrasies of your organization, effectively creating a customized platform with minimal resources, you receive the most advanced cloud email solution to reduce your risk of email-borne attacks.

### Empower Users to Make Better Decisions with **In-the-Moment Risk Mitigation**

User engagement capabilities provide context and nuance that are critical to support your risk migration strategy. With tailored, customized banners based on policy, in addition to spotlight visuals within Mailbox Intelligence, your end users are better able to determine if there's a threat.

### Reduce Your Exposure with **Integrated Incident Response & Reporting**

From automated removal to two-click bulk remediation, GreatHorn's integrated incident response capabilities are designed to speed response time, reducing exposure and simplifying the response process.

### Improve Your Risk Profile with **Fact-based Analytics to Reduce MTTD and MTTR**

Improve your risk profile by reducing your mean time to detect and respond to threats that bypass the perimeter by taking a fact-based approach to email security. GreatHorn measures risk across the entire email envelope, including relationship analytics, to automate granular policy-based actions. By offering dynamic, patented algorithms that analyze relationship, reputation, authentication analysis, and layering in-the-moment context to educate users at the moment a potential threat reaches them, your organization can detect and remediate threats faster.
